

Internship – Junior Developer C# .NET

Your Role:

Join SolarWinds and grow with us! We are looking for an intern developer with solid command of C# and .NET. You'll have an opportunity to collaborate with outstanding software engineers of the IT Observability business and experience the development of our flagship SaaS product (<https://www.solarwinds.com/solarwinds-observability/interactive-demo>). You will be part of a self-organized scrum team working based on Agile principles. You will be exposed to cutting-edge technologies and industry best practices, mentored by experienced developers.

Your Impact:

- You will assist with the design, review, and development of full-stack features in a scrum team that writes code, tests it, takes care of its high quality, and maintains it.
- You and your team will be responsible for the entire development process, from prototyping to development, testing, and deployment.
- You will cooperate with other teams and stakeholders on a daily basis, in an international environment.
- You will primarily use Visual Studio / Visual Studio Code, GitHub, JIRA, Confluence, Docker/Kubernetes, CI/CD tools, etc.

Your Experience:

- We want you to understand object-oriented programming concepts, be able to convert problems into algorithmic solutions, and have basic experience with source control like Git.
- We expect passion to develop clean and maintainable code and to follow commonly used practices such as unit/automation testing, and secure product development.

- Verbal and written communication skills in English are needed.
- Preferred experience: C#, .NET; we would appreciate it if you are familiar with React, Microservices, Team City, and MS SQL.
- Pursuing a degree in computer science, software engineering, or related field is preferred but not required.
