

Software Developer in Test - fresh graduate

Full time job for fresh graduated University students with finishing in 2025 or to be MAX 12months after UNI graduation, place of work Brno, CZ.

As a member of the technical/process QA division, you will design, install and evaluate quality control methods and systems. Design continuing maintenance of product quality. Develop standards and procedures to provide quality guidance and methods. Analytics team is owning all analytics in the powerful NetSuite product.

Are you thinking about a new role? We're looking for a Junior Software Engineer in Test to join our team in Brno. Our team focuses on the back-end office of the module where we develop features that assist customers with their investment and financial decisions as well as features that reduce day-to-day customer facing issues. While this may sound simple, our customers' needs vary widely, and our code base is complex. The NetSuite solution is written in Java with Oracle DB as the main persistence layer. The UI uses internal JavaScript framework.

This role is for someone who wants to be involved with all phases of the development process: specification, design, implementation, testing, and maintenance. In our teams, you will learn not only about the software, but also about the business and our customers, helping you become a well rounded individual. We'd like you to be passionate about clean code, quality, and SOLID principles. Our team ensures that all junior software engineers receive continuing education and code review mentorship daily. If you want to work in an agile environment with continuous integration and TDD practices, our team would be a phenomenal fit.

Ideal Qualifications:

- Computer Science degree (Science, Technology, Engineering, and Math).
- Experience with Java or any similar object-oriented programming language with the ability to write programs and apply OOP principles.
- Intimate understanding of modern web applications and extensive experience with database-driven applications such as SQL.
- Great problem-solving skills and the ability to abstract functional requirements and strong communication abilities in both technical and non-technical contexts.
- Analytical thinker who wants to work in a team environment and develop and grow their skills.
- Embodiment of our Values: Customer First, Collaboration, Innovation, and Integrity

Starting day June 1, 2025 onward!

More info and application [here](#).
