Compiler Design in C - Chapter 6.6 (Declarations)

Tomáš Rohovský   Adrián Novosád

25th October 2012

The presentation deals with a part of code generation, specificaly with the code generation of declarations. It will be demonstrated on the compiler of a proper subset of ANSI C language. Subsequentely will be introduced how simple variable declarations, structure and union declarations, enumerated-type declarations, function declarations, compound statements and local variables are handled.
