Table of Contents

Contents

- ▶ Introduction
- ▶ Theoretical Introduction
 - ▶ Flashcard type of e-learning
 - ▶ SLD resolution and visualization
- ▶ Implementation
- ▶ Conclusion

Introduction

Basic goals of programming language e-learning course

- ▶ Dealing with inconsistency of e-learning methodology
- ▶ Creation of unified framework for e-course
- ▶ Exchange of information
 - ▶ Content-related exchange of information
 - ▶ Planning of tasks
 - ▶ Social support
- ▶ Creation of software application

Theoretical Introduction

Parts of software application

- ▶ Flashcard system
 - ▶ Memorization of information
 - ▶ Based on cognitive psychology models
- ▶ Visualization of SLD resolution
 - ▶ Content dependent visualisation (Prolog, Haskell, ...)
- ▶ Structure of software application
 - ▶ ER Diagram, Function diagram, Diagram of roles, ...

Flashcard type of e-learning

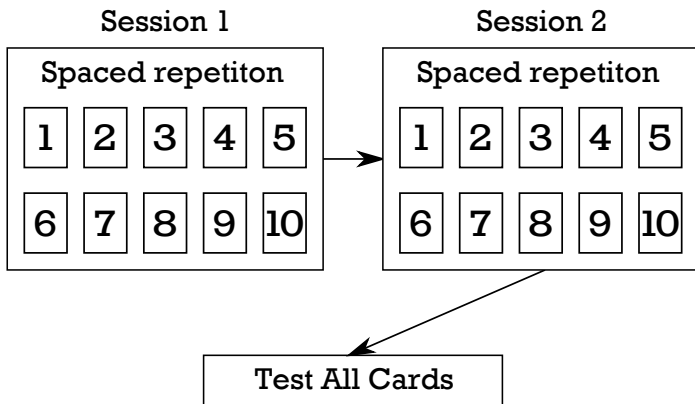

Description of flashcard system

- ▶ Repetition of (virtual) cards
- ▶ Based on methods for foreign language learning
- ▶ E-Course content is stored in *database of facts*
- ▶ *Database of facts is divided into lessons (by topic and by difficulty)*
- ▶ *Showing of cards based on difficulty*

Hypotheses behind flashcard systems

- ▶ Strength hypothesis
- ▶ Multiple-trace hypothesis

Example Diagram of Flashcard system

SLD resolution

Description of Selective Linear Definite (SLD) clause resolution system

- ▶ Visualisation of SLD clause resolution
- ▶ Visual completion of programming code

Informal description of SLD resolution:

- ▶ Every logical program consists of clauses
- ▶ Clause is set of literals
- ▶ Literal has logical value – true or false
- ▶ Two clauses resolves in another clause
- ▶ SLD resolution is visualized by tree

SLD resolution example

```
father_child(tom, sally).  
father_child(tom, erica).  
father_child(mike, tom).  
sibling(X, Y)      :- parent_child(Z, X), parent_child(Z, Y).
```

```
?- sibling(sally, erica).
```

```
Yes
```

```
?- sibling(X, erica).
```

```
tom
```

Implementation

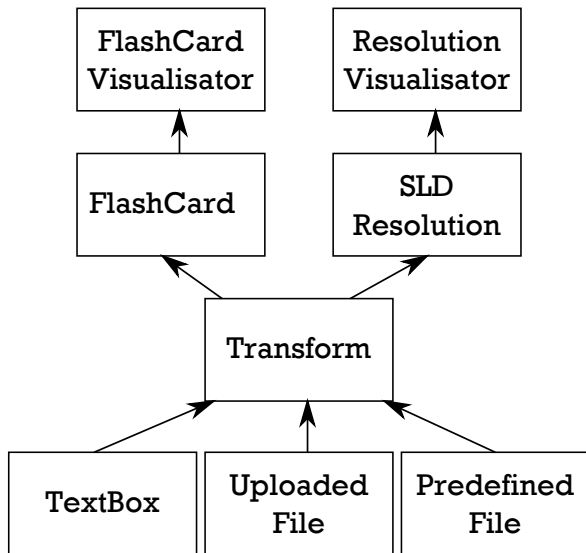

The whole system is divided into two main sections

- ▶ Flashcards
- ▶ SLD resolution visualization

The architecture is divided into several parts

- ▶ Predefined files
- ▶ Uploaded files
- ▶ Textbox

System Architecture

Conclusion

Completed parts

- ▶ Logic programming
- ▶ Flashcard

Future interests

- ▶ Experiments with flashcard application
- ▶ Evaluation of students progress
- ▶ Implementation of functional programming
 - ▶ Selection of functional programming language (Examples, ...)
 - ▶ Description of theoretical preliminaries (Lambda Calculus, ...)
